

### Abstract of disclosure

5       The Wireless Information Meter is a meter that has solved the many  
problems of having to use wires to send and receive information from and to  
meter. Now that the meters can be wireless where they can save in additional  
cost and installation and also solve the many problems that come along with  
having to use wires in hooking up to operate and receive and send  
10       information. What is very unique about this invention is that the meter can  
be placed a great distance from the source the information is be received or  
sent to making the meter more versatile then any wired meters. This meter  
can perform many functions in one meter without the use of any wires to  
power it, get information or receive information and can display the  
15       information in the meter display with and without the use of control button  
on the meter and is totally waterproof for indoor or outdoor applications.
